

OMEGA INTELLIGENCE SYSTEM 10

PRODUCT ANNOUNCEMENT

27 SEPTEMBER 2018

LONDON, UNITED KINGDOM, 27 September 2018 - Today Omega Intelligence Systems Ltd announces the 10th 'Jubilee' version of its flagship analytical product - Omega Intelligence System 10 - declaring bold entrance into a new era of Artificial Intelligence and Business Automation.

INTRODUCTION

The Big Data and AI revolution of recent years has changed the way companies acquire and process data to produce meaningful insights that support their business. However, most of these technologies are aimed at the top biggest multi-national corporations due to high costs and complexity as well as the requirement of big enough internal dataset.

To answer these challenges we've built a portfolio of technologies, business applications and industry solutions that can be easily applied in organisations of any size, to the new markets and emerging industry sectors that process large volumes of fast-moving data.

Additionally, our focus was on autonomy and automation of the software that brings speed and competitive advantage while at the same time reducing human labour and human factor errors.

This is our contribution to the development of the data science and AI industry and a big step ahead, where, thanks to close cooperation with our high-profile existing customers, we have been able to quickly transition from experimentation to production-quality solutions.

Version 10 is equipped with reorganised and thoroughly improved predictive analytics algorithms, business decision support with integrated simulations and multi-step optimisation solvers, even

more optimised algorithms for data and text mining, computer linguistics and machine learning, as well as a completely new business automation module, which enables autonomous operations based on the use of artificial intelligence.

With the new 10th version, there will be a new line of business applications and specialised industry solutions with easy to use deployment scenarios, new training materials and bespoke solutions for corporate users.

Our software is always engineered with business in mind, easy to use and intuitive for casual users but also offer more advanced features for professional analysts as well as programming interfaces that can be easily consumed by developers.

This is the most complete and mature set of software with features that accumulate experience from the 9 previous major versions (since June 2003) and more than a decade of R&D activities.

We invite you to get acquainted with the 9 core analytical features of the system as well as its areas of application and industries we serve, helping our customers achieve a new competitive advantage, growth, and organisational efficiency.

CORE FEATURES

- Master Data Management
- Descriptive & Exploratory Analytics
- Predictive Analytics & Modeling
- Data & Text Mining
- Machine Learning & Advanced AI Techniques
- Graph Analytics
- Business Intelligence & Decision Support
- Simulations & Optimisation Solvers
- Business Automation

APPLICATIONS

- Business Analytics
- Operational Excellence
- Digital Transformation
- Strategy & Growth
- Market Intelligence
- Quantitive Finance
- Legal & Contract Intelligence
- Cognitive Computing

INDUSTRIES

- Banking & Finance
- Retail & e-Commerce
- High Technology
- Production & Manufacturing
- Global Trade & Supply Chains
- Telecommunications
- Energy Sector
- Bespoke solutions for any business

AVAILABILITY

Omega Intelligence System 10 is currently available for selected customers, technology partners and as well as accredited programmers and solution makers as an early adopter programme intended for testing and evaluation.

The new release and license model assume much

more frequent updates to version 10 so that users can use the latest advancements as quickly as possible on a current basis, maintain backward compatibility with future updates (within version 10), and access all advanced software features without additional fees.

OMEGA INTELLIGENCE SYSTEM 10 GENERAL AVAILABILITY (GA) IS EXPECTED IN LATE 2018

ABOUT COMPANY

Omega Intelligence Systems Ltd is a private, independent software vendor and research lab focused on practically applied data science and analytics that drives insights, competitive advantage and business innovation.

Our world-class research and engineering teams deliver market leading software products using the latest achievements in the field of Artificial Intelligence and Automation while also conducting long-term scientific projects and delivers bespoke business solutions including professional consulting services.

Our flagship product “Omega Intelligence System” has a proven track record in tailored, highly specialised, bespoke industry solutions that are developed in close cooperation with our customers and adjusted exactly to their needs.

Having 17 years of experience with multiple clients across the globe and dedicated R&D team we are uniquely positioned among very few companies that can deliver superior software and business expertise in this field.

We invite you to contact us to begin fruitful cooperation and eventually to unlock the full potential of your business.
